

2018 INTERNET OF THINGS (IoT) SUMMER INSTITUTE for 7-12 EDUCATORS

Raise your hand if you are a middle or high school science/math, technology, or career technical education (CTE) teacher in the state of Texas who wants to be better plugged into the Internet of Things (IoT), 3-D printing, energy conservation, and similar avenues of innovation. *We're calling on you!*

Join us in Aggieland next summer to take advantage of an exclusive National Science Foundation-funded opportunity to learn more about our increasingly IoT-dominated world and impacts on both your students and your classroom. Participating teachers will spend two weeks on the Texas A&M campus (lodging and meals provided) and receive targeted, one-on-one instruction from Texas A&M faculty and industry mentors, in addition to a 3D printer and materials, IoT sensors and software, continuing education credits, and \$3,000 in compensation after successful completion of various follow-up activities during the school year!

Space is limited to 10 teachers, so reserve your spot early!
